

Rocko® Series with Wera slipSTOP® Blade

The extra tough screwdriver for industrial applications.

The Rocko® series is the right screwdriver for industrial applications.

The Rocko® series achieves its enormous wear resistance and ruggedness through specially coated and hardened hexagon steel blades, made of 73 Mo V 5 2 material.

The hexagon bolster provides higher torque transfer, by attaching open-jawed or ring spanners when loosening tight screws.

Slipping out of the screw head is prevented by the Wera slipSTOP® blade for popular drive types and sizes (slotted, Phillips, and Pozidriv).

Through laser treatment this blade is given an extremely rough drive end which literally "bites" into the screw head.

info

- Wear resistant:** Specially coated and hardened hexagon steel blades
- Powerful:** Hexagon bolster for loosening tight screws
- Safe:** The Wera slipSTOP® blade prevents slipping out of the screw head
- Ergonomic design:** Kraftform® handle for faster, more powerful and less tiring screw-driving action
- Easy identification:** With handle marking, including screw symbol and size

The Rocko® series features the proven Kraftform® handle. The handle fits perfectly in the hand, because it is shaped by the hand. Every muscle will grip and the whole hand is in contact with the handle.

New materials used for the characteristic hard and soft zones deliver faster, more powerful and less tiring screw-driving action.

The handle marking, including the screw symbol and size on the tip of the handle, makes it easy to find the right screwdriver in the tool belt or bag.

For more detailed information on this new development see page 13.
