

January 2007

Application: Facilitate assembly operations with a continuous supply of materials.

Problem: Cycle time at work cell must be reduced; The associate is wasting production time by waiting for material to be delivered by the fork truck.

Solution: **The Herkules Power Rotate System.** Drastically reduce application cycle times by eliminating the lag time between when the operator runs out of material and when the fork truck delivers a replenished rack. Increase production, decrease downtime, Increase plant output.
