TRI Air Testing Inc. 1-800-880-TEST

Compressed Air Testing Indoor Air Testing Medical Gas Testing

TRI, an AIHA accredited laboratory for industrial hygiene, provides compressed air testing, indoor air testing and medical gas testing for pharmaceutical, medical, commercial, medical, dive and fire department regulations and standards. We care about your air!!

Compressed Air/Medical Gas Testing

You will receive a compressed air testing kit with fittings to allow convenient connection to your compressed air or medical gas system. The entire sampling procedure takes just minutes and comes with simple but detailed instructions. After taking the test, the samples are then returned to TRI for analysis. Most laboratory analyses are completed within 24 hours. A detailed analytical laboratory report and a certificate suitable for framing is mailed within three days.

Indoor Air Testing (IAQ)

TRI Air Testing has designed a cost effective Building Air Screen for Indoor Contaminants Kit (BASICKit) to assist you with diagnosing indoor air complaints. Our easy to operate IAQ air sampling system consists of a manually operated air exchange pump and a non-pressurized sample container which can be used to measure indoor air quality in practically any area. Analytical results are provided within 24-hours from receipt of samples at TRI.

Air Quality Standards

There are many air quality standards governing compressed air that's used for life support, medical and pharmaceutical standards and suggested standards for indoor air quality. TRI's laboratory has the capability to sample and analyze all the requirements to meet these standards and many more. Please visit our web page for links to air quality standards.
